

# FOOD ORDERING BEHAVIOUR ANALYSIS

## Using Tableau

---

**Project Report**

Submitted by: Chandan Gupta

B.Tech (CSE)

## Abstract

This project analyzes a dataset of 50,000 food ordering records using Tableau to understand customer behaviour, cuisine preferences, meal trends, ratings and city-wise ordering patterns. Interactive dashboards convert raw data into business insights that support better marketing and operational decisions.

## Objectives

- Understand customer ordering behaviour
- Identify popular cuisines and meal types
- Analyze city-wise demand
- Evaluate ratings and restaurant segments
- Develop an interactive Tableau dashboard

## Dataset Overview

Records: 50,000

Columns: 19

| Field           | Description       |
|-----------------|-------------------|
| order_id        | Dataset Attribute |
| user_id         | Dataset Attribute |
| age             | Dataset Attribute |
| city            | Dataset Attribute |
| order_time      | Dataset Attribute |
| day_type        | Dataset Attribute |
| cuisine         | Dataset Attribute |
| meal_type       | Dataset Attribute |
| restaurant_type | Dataset Attribute |
| order_value     | Dataset Attribute |

## Methodology

1. Data Collection
2. Data Cleaning
3. Import into Tableau
4. Dashboard Creation
5. Insight Generation
6. Business Recommendations

## Flavors Across Cities

Objective: Shows cuisine popularity across major cities.

Observation: The visualization highlights important customer behaviour patterns and supports business decision-making.

Recommendation: Use these insights for targeted marketing, menu optimization and customer retention.

## Age Group vs Restaurant Segment

Objective: Millennials and Gen-Z dominate food orders.

Observation: The visualization highlights important customer behaviour patterns and supports business decision-making.

Recommendation: Use these insights for targeted marketing, menu optimization and customer retention.

## Cuisine Preference

Objective: Customer demand is distributed across cuisines.

Observation: The visualization highlights important customer behaviour patterns and supports business decision-making.

Recommendation: Use these insights for targeted marketing, menu optimization and customer retention.

## Company Type vs Meal Type

Objective: Meal preferences across social settings.

Observation: The visualization highlights important customer behaviour patterns and supports business decision-making.

Recommendation: Use these insights for targeted marketing, menu optimization and customer retention.

## Ratings Analysis

Objective: Customer ratings remain consistently high.

Observation: The visualization highlights important customer behaviour patterns and supports business decision-making.

Recommendation: Use these insights for targeted marketing, menu optimization and customer retention.

## Cities by Order Volume

Objective: Comparison of total orders among cities.

Observation: The visualization highlights important customer behaviour patterns and supports business decision-making.

Recommendation: Use these insights for targeted marketing, menu optimization and customer retention.

## Final Interactive Dashboard

Objective: Comprehensive Tableau dashboard.

Observation: The visualization highlights important customer behaviour patterns and supports business decision-making.

Recommendation: Use these insights for targeted marketing, menu optimization and customer retention.

## Key Findings

- Millennials and Gen-Z place the highest number of orders.
- Demand is well distributed across major cities.
- Different cuisines attract comparable customer interest.
- Customer ratings remain stable across meal types.
- Interactive dashboards simplify KPI monitoring.

## Business Recommendations

- Launch age-specific promotions.
- Provide personalized cuisine recommendations.
- Strengthen loyalty programs.
- Use dashboards for operational monitoring.
- Expand marketing in high-demand cities.

## Conclusion

The Tableau dashboard successfully transforms raw food ordering data into actionable business intelligence. The analysis enables organizations to understand customer behaviour, optimize marketing strategies and improve decision-making.
